The CONNECT MRE DUC MWADJ microwave presence detector switches are designed to provide automatic control of lighting loads via the Connect marshalling box. The CONNECT MRE DUC MWADJ detects movement using a highly sensitive microwave detector and turn the load on. When an area is no longer occupied the load will switch off after an adjustable time out period. This microwave works by emitting low power microwave signals and measuring the reflections as the signals bounce off moving objects. The CONNECT MRE DUC MWADJ has a unique adjustable sensor head that allows the area of detection to be optimised for the application.
